

TRIAL DATA

This report is the result of field trials carried out by MERISTEM technical department. Trials were carried out in one table grape reference area. Some other details are:

Location	La Romana (Alicante-Spain)
Cropping system	Trellis (2.5 m x 2 m)
Variety	Aledo
Volume for the foliar application	800 L/ha
Samples for the evaluation of qualitative parameters	25 bunches in each fertilization program
Experimental design	Complete plots
Harvest date	November 8th
Other data	Fruits were bagged after fruit setting and they remained bagged until the harvest

FIELD TRIALS RESULTS

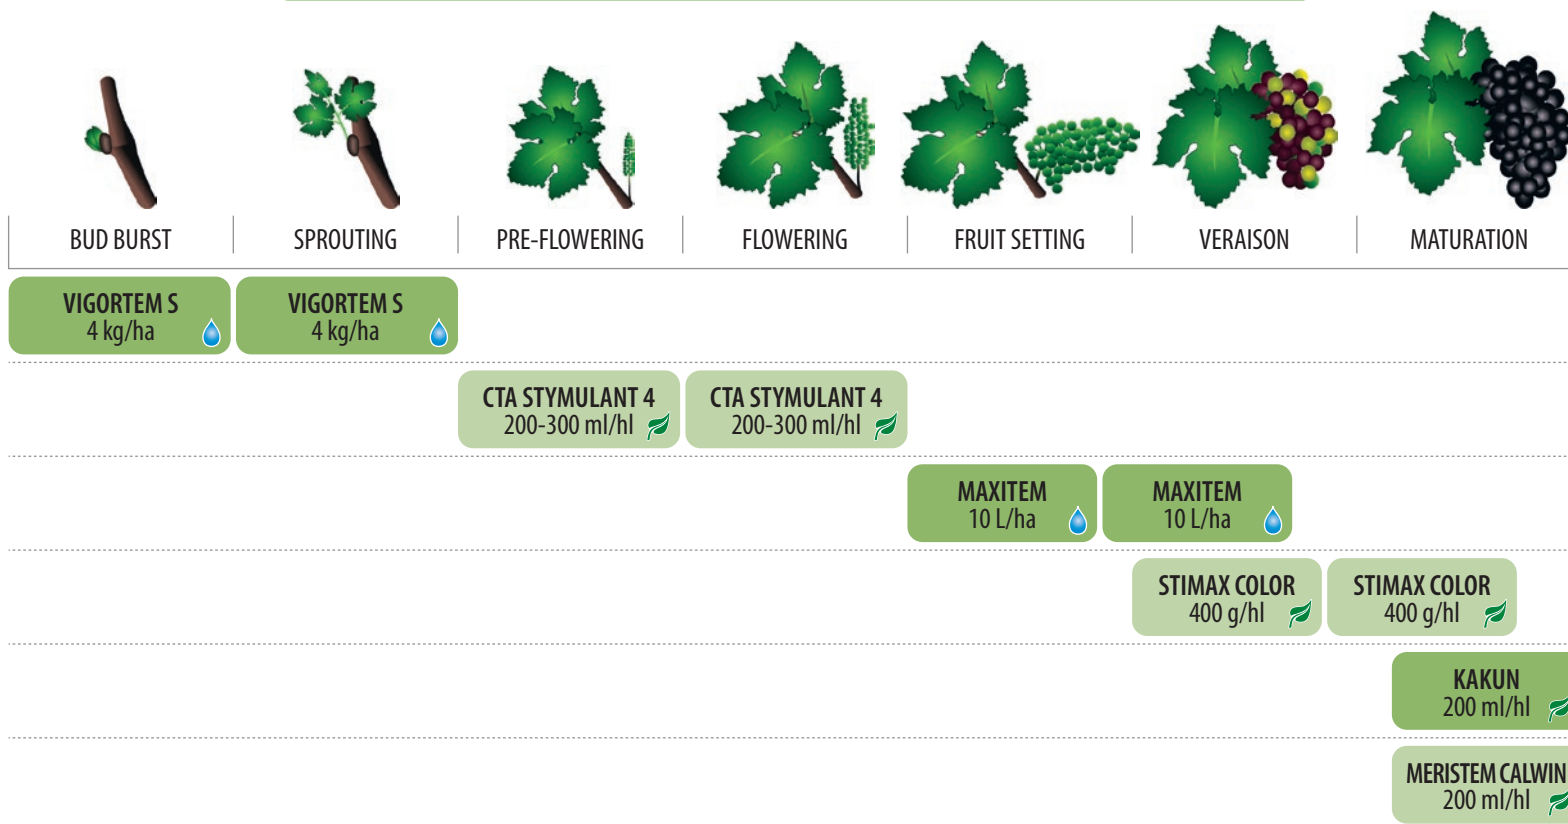

FERTILIZATION PROGRAM: TABLE GRAPES

QUÍMICAS MERISTEM, S.L. · C/ Regaliciar, 7 · Polígono Ind. Moncada II

FERTILIZATION PROGRAM: TABLE GRAPES

FOLIAR APPLICATION ROOT APPLICATION

ELONGATION OF THE BUNCH

Applications of CTA STYMULANT 4 during flowering stage contributed to obtain longer bunches in MERISTEM PROGRAM.

FRUITS ENLARGEMENT

Bunches in MERISTEM PROGRAM increased 28% their average weight, compared to those in Control Program. MERISTEM bunches reached 1262 g vs 981 g in Control Program.
