

## PRODUCTS

STIMAX FLASH is a strong biostimulant indicated to activate plant metabolism and improve soil conditions. It is a highly soluble product that contains aminoacids and organic matter. Specially recommended for the beginning of crop cycle.

CTA STYMLANT 4 is a biostimulant obtained from *Ascophyllum nodosum* seaweed extract and enriched with chelated microelements. Recommended to enhance the development of the crop and increase the quality of the fruit.

AMINOMAX N is a biostimulant with aminoacids and mineral nitrogen. Its application is useful to increase the YAN content in wine must, which is a key factor in yeast metabolic activity during the fermentation.

POTAMAX is a special NPK 0-6-47 nitrogen-free formulation indicated for drip irrigation. Its EDTA content will assure a maximum absorption of potassium into the plant. POTAMAX should be applied during last stages of fruit development to improve size and colour.

# FERTILIZATION PROGRAM: WINE GRAPES

 FOLIAR APPLICATION     ROOT APPLICATION

## ELONGATION OF THE BUNCH

BUNCH LENGTH (cm)

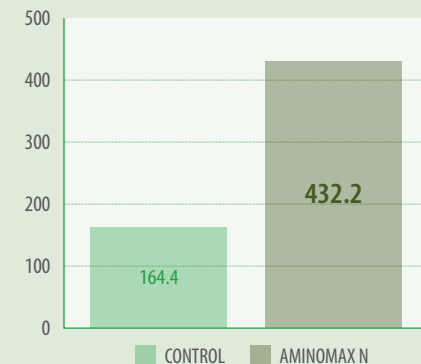

16% 

Applications of CTA STYMULANT 4 during flowering stage contributed to increase bunches length.

## YEAST ASSIMILABLE NITROGEN

CONTENT OF YAN (mg/L)

(\*) Trials have been carried out by external certified companies.

163% 

Applications of AMINOMAX N during veraison increased the content of Yeast Assimilable Nitrogen (YAN) up to 163%.
