TRANSPLANTING

VEGETATIVE DEVELOPMENT

FLOWERING

FRUIT SETTING

FRUIT DEVELOPMENT

FRUIT RIPENING

11-30-11 NPK balance with organic matter and growth-promoting rhizobacteria	CRISTAPHOS 36 kg/ha/week, for 3 weeks
Fertilizer with non-mycorrhizal microorganisms	TRICOBEST 1 kg/ha · 2-3 applications with an interval of 10-15 days
Root system biostimulant	VIGORTEM S 2-3 kg/ha · Repeat after 7-10 days
Flowering biostimulant	MOLIBOR Foliar: 200-300 ml/100 L · Fertig.: 2-3 kg/ha Repeat in each flowering process
Metabolic biostimulant, improves flowering and fruit setting	LIDEX Foliar: 200-250 g/100 L · Repeat 7-14 days after application during the flowering process · Fertigation: 2.5 kg/ha
Amino acid biostimulant, enhances fruit enlargement, color and sheen	MAXITEM 5-7 L/ha
22-0-8+12 CaO NPK balance, rapid penetration of nitrogen and calcium	NITROEXPRES 50 kg/ha/week, distributed over the irrigation periods

Note: The above fertilization program it's a general recommendation based on the experience and studies of Meristem. It should serve as a guide, having to be adapted to each individual case depending on both local conditions and crop characteristics.

 Root application

FERTILIZATION PROGRAM: EGGPLANT PRODUCT USE RECOMMENDATIONS

CRISTAPHOS

CRISTAPHOS is a 11-30-11 NPK balance with organic matter and rhizobacteria. Its application promotes root development, the organic matter improves physical and chemical characteristics of the soil, and the rhizobacteria enhances nutrient's absorption, improving crop vigor.

TRICOBEST

TRICOBEST is a high quality and high soluble concentrate of humic acids, enriched with *Trichoderma harzanium* (strain IABTH01). It has a notable biostimulant effect, enhancing root development and crop vigor. The strain helps solubilize phosphorus and chelate other nutrients, increasing plant availability. Humic acids improve physical and chemical soil properties.

VIGORTEM S

VIGORTEM S combines a high phosphorus content, humic and fulvic acids, seaweed extract and amino acids. VIGORTEM S promotes root growth and vigor ensuring crop establishment, and due to humic and fulvic acids, improves physical and chemical soil properties.

MOLIBOR

MOLIBOR stimulates the early onset of pollen and improves its quality, resulting in more viable flowers. MOLIBOR reduces flower abscission, enhancing the setting process.

LIDEX

LIDEX is a metabolic processes biostimulant that promotes crop development and improves flowering and fruit setting, optimizing crop productivity.

MAXITEM

MAXITEM combines fulvic acid that improves soil structure with amino acids that enhance nutrient absorption and movement through the plant. MAXITEM enhances crop vigor and promotes fruit size, color, and sheen.

NITROEXPRES

NITROEXPRES is a 22-0-8+12 CaO NPK balance. Nitrogen and calcium rapid penetration supply that improves crop development and fruit quality. Contains EDTA chelating agent, which enables the rapid assimilation of the elements in the elements.
